

Lab 10 Email List Cleaner

Create a program that reads a CSV file that contains a list of prospects for an email list, reformats the data, and writes the cleaned list to another file. Your output should exactly match the output below. This program does not take any user input. Abbreviated file input and output are displayed below. The full files contain 500 entries.

Console

```
Welcome to the Email List Cleaner

Source list:  lab10_prospects.csv
Cleaned list: lab10_prospects_clean.csv

Congratulations! Your list has been cleaned!
```

The lab10_prospects.csv file

```
FIRST_NAME, LAST_NAME, EMAIL
james, butler, jbutler@gmail.com
Josephine  , Darakjy, josephine_darakjy@darakjy.org
ART, VENERE, ART@VENERE.ORG
...
```

The lab10_prospects_clean.csv file

```
First_Name, Last_Name, email
James, Butler, jbutler@gmail.com
Josephine, Darakjy, josephine_darakjy@darakjy.org
Art, Venere, art@venere.org
...
```

Specifications

- Use the provided CSV file named lab10_prospects.csv that contains a list of prospects.
- Your program should fix the formatting problems and write a file named lab10_prospects_clean.csv.
- All names should use title case. To convert a string to title case, you can call the title() method from the string.
- All email addresses should use lowercase. To convert a string to lowercase, you can call the lower() method from the string.
- All extra spaces at the start or end of a string should be removed. To do that, you can call the strip() method from the string.
